ASSURE

Hardware Installation

Our hardware installation service includes the delivery, physical installation and cabling of server, storage & networking equipment into IT environments.

We conduct straightforward device additions to large-scale end-to-end installations of complex infrastructure platforms including for AI and HPC.

Our solution enables rapid, cost-effective, deployment allowing customers to bring environments into operation seamlessly and commence business critical activity.

To get a quote...

Please provide the following information:

- The location(s) for installation.
- An itemised list of equipment to be installed.
- The number and type of connections to be cabled.
- Rack layout & cabling matrix (if available).
- How will the equipment be presented i.e. delivered directly to site or at another location?
- Do you require equipment to be consolidated and stored prior to delivery?
- Do you require equipment to be asset tagged and serial numbers recorded?
- Do you require equipment to be delivered to site?

Features

- Order consolidation & secure warehousing

- Pre-deployment staging & configuration

- Rack & Aisle containment installation

- Structured Cabling Design & Installation

- White-glove delivery

- Hardware & cabling installation Optimised to improve efficiency and minimise risk.

- Handover support

- End-of life decommission & disposal
