## Introduction

# Computing for business

**As the way we work evolves, those harnessing AI will lead the way.**

In a world of remote working and flexible hours, versatility is key—for both workers and the technology they rely on. At the same time, AI is becoming more prevalent in the workplace, allowing businesses to boost productivity to levels never before seen.

To remain competitive in these fast-changing times, businesses of all kinds need truly intelligent technology. It's predicted that AI-powered devices will be in mainstream use across industries by 2025, with 60% of businesses investing by 2027.<sup>1</sup> AI laptops will free up employees for more important and fulfilling work, helping teams maintain both a commercial edge and tight security.

It's an exciting time to embrace this new generation of AI-powered laptops—designed to help people work smarter, not harder.

1. Canalysis, Now and next for AI-capable PCs, 2023.

## Computing challenge

**The pursuit of productivity is putting additional strain on workers and companies to perform.**

Mobile devices have started to adapt to more automated ways of working, but professional laptops have lagged behind.

That means day-to-day business tasks haven't been optimised as much as they could be, and people are working much harder than they have to. In fact, 64% of employees say they lack time and energy to do their job.<sup>1</sup> It's no surprise then that 70% of employees would use AI to lighten their workload.<sup>1</sup>

## Computing opportunity

**Staying ahead of the curve means working smarter, not harder, with AI-powered business laptops.**

Meet the world's first true generation of AI-powered laptops. They're designed to take the pressure off workers and businesses, helping them perform at their peak.

With AI encased in beautifully designed, light-yet-durable hardware, these laptops form part of a seamlessly connected Samsung ecosystem.

Thanks to AI, users can work anywhere, uninterrupted, unlocking true business mobility. And they can do all this with confidence, thanks to government-trusted Samsung Knox security.<sup>2</sup>
